1 OVERVIEW

The NuMaker-emWin-NK-N9H30 development board is a specific development tool based on N9H30F61IEC IC to provide customers with a low cost and ease of development. It can be easily customized for customers to provide their own HMI (Human Machine Interface) device server products.

2 INTRODUCTION TO NUMAKER-EMWIN-NK-N9H30 BOARD

The NuMaker-emWin-NK-N9H30 solution uses an outstanding CPU core ARM926EJ-S, N9H30F61IEC IC which runs up to 300 MHz and features the embedded 64MB DDR memory, with 16 KB I-cache, 16 KB D-cache and MMU, 56 KB embedded SRAM and 16 KB IBR (Internal Boot ROM) for booting from SPI Flash or booting from NAND Flash.

The NuMaker-emWin-NK-N9H30 solution integrates touchscreen display, voice input/output, rich serial port service and I/O interface, providing multiple external storage methods. It contains two kinds of board, including the NuMaker-emWin-NK-N9H30 board and NuMaker-TFT-LCD7 board.

2.1 NuMaker-emWin-NK-N9H30 Board Features

- N9H30F61IEC IC: LQFP216 pin MCP package with DDR (64 MB).
- SPI Flash use W25Q256JVEQ (32 MB) booting with quad mode or storage memory.
- NAND Flash use W29N01HVSINA (128 MB) booting or storage memory.
- Provide one Micro-SD/TF card slot served either as a SD memory card for data storage or SDIO (Wi-Fi) device.
- Provides 2 sets of COM ports.
 - One DB9 RS-232 port with UART_0 used 75C3232E transceiver IC can be served for function debug and system development.
 - One DB9 RS-232 port with UART_2 used 75C3232E transceiver IC for user application
- 22 GPIO expansion ports, including 7 sets UART function
- JTAG interface provided for software development.
- Microphone input and Earphone/Speaker output with 24-bit stereo audio codec (NAU88C22) for I2S interfaces.
- 6 sets of user-configurable push button keys.
- 3 sets of LED for status indication.
- Provided SN65HVD230 transceiver IC for CAN bus communication.
- Provided MAX3485 transceiver IC for RS-485 device connection.
- Provided one buzzer device for program application.
- 2 sets of RJ45 port with Ethernet 10/100Mbps MAC used IP101GR PHY IC
- USB_0 that can be used as Device/HOST and USB_1 that can be used as HOST supports pen drives, keyboards, mouse and printers.
- 7" resolution 800x480 4W resistive touch panel for 24bits RGB888 interface.
- Provides over-voltage and over current protection used APL3211A IC
- Retain RTC battery socket is for CR2032 type and ADC0 detect battery voltage.
- System powered could be supplied by DC-5V adaptor or USB VBUS..

- SOC CPU: nuvoTon N9H30F61IEC (U5)
- Battery power for RTC 3.3V powered (BT1, J1), can detect voltage by ADC0
RTC power has 3 sources:
 - Share with 3.3V I/O power.
 - Battery socket for CR2032 (BT1).
 - External connector (J1).
- Board version 2.1

4 REVISION HISTORY

Date	Revision	Description
2019.10.25	1.00	Initially issued.
2018.04.02	1.01	Remove RMII
2018.09.23	1.1	1. Add Earphone 2. Add TVS
2019.10.25	2.0	Change N9H30K41I to N9H30F61IEC
2020.12.17	2.1	1. Use 7" panel 2. Add USB power
2021. 03. 26	2.11	1. Rename NuMaker-emWin-NK-N9H30

Important Notice

Nuvoton Products are neither intended nor warranted for usage in systems or equipment, any malfunction or failure of which may cause loss of human life, bodily injury or severe property damage. Such applications are deemed, "Insecure Usage".

Insecure usage includes, but is not limited to: equipment for surgical implementation, atomic energy control instruments, airplane or spaceship instruments, the control or operation of dynamic, brake or safety systems designed for vehicular use, traffic signal instruments, all types of safety devices, and other applications intended to support or sustain life.

All Insecure Usage shall be made at customer's risk, and in the event that third parties lay claims to Nuvoton as a result of customer's Insecure Usage, customer shall indemnify the damages and liabilities thus incurred by Nuvoton.
